

Pharmaceutical & Medical Device

Irwin Fritchie has a nationally recognized and respected pharmaceutical and medical device practice. We have the resources to manage litigation from inception through trial and appeal, as well as the flexibility to work side by side with other premier law firms.

Our work includes the defense of products, including anti-depressants, aspirin, asthma medications, blood products, breast implants, chemotherapy agents, cholesterol medications, diabetes drugs, diet drugs, gastrointestinal medications, hormone-replacement therapies, impotence medications, latex products, maxillary-cranial implants, migraine medications, PPA, spinal-fixation devices, sutures, urological implants, vascular stents, vitamins, and knee and hip implants.

Many of the world's leading pharmaceutical and device companies rely upon our lawyers when their products become the target of litigation. We have successfully handled matters from "bet the company" litigation to individual claims in jurisdictions around the country. We have extensive experience in mass-tort and multidistrict litigation, including complex document review and production, motion practice, lay and expert witness depositions, hiring and development of defense experts, pre-trial preparations, and lead trial counsel.
